### Sure Set Holster Mounts

The last item we will examine is not a holster, but a unique adjustable mount to use with your favorite hip holster, the Sure Set Holster Mount. The manufacturer's slogan is "Where you want it, when you want it." Constructed of sheet metal, the mount will adjust to present nearly any belt holster at any desired angle. Robert Anderson, CEO of the company, developed this holster mounting system when he wanted to carry a gun in his vehicle and found it difficult to get to if worn on the body. This gun mount may be placed under a desk, table, counter top, bed or attached to a wall. It may be placed strategically to carry a handgun concealed in a car. A large hunting handgun may be mounted on the firewall or between the seats of a hunting or camping vehicle, or a holstered handgun can be mounted conveniently to an ATV. The Sure Set Holster Mount even has a fixture to adapt it for attaching to a bed frame.

The mount consists of three basic sheet metal pieces plus two metal strips to attach the holster to the mount. The oval base has five mounting holes to fasten it securely to the wall, counter top or table. A 6.75inch long plate attaches securely to the base with a heavy-duty machine bolt, and it is adjustable to any angle extending from the base. Multiple lock washers lock it in the desired position. A U-shaped metal bracket attaches to the extension plate in either of two holes to vary the height of the holster from the base. The bracket will rotate 360 degrees and locks in the desired angle with a lock nut. Two metal strips, 4 inches by 1.38 inches, are placed through the belt loop and then attach to the U-shaped bracket with two machine screws and lock nuts. The combination of the extension plate swiveling around the base, and the U-shaped bracket rotating around the end of the extension plate, allows you to adjust the Sure Set Holster Mount to place the holstered handgun exactly as desired. This is a perfect example of the KISS Principle. I do not think I can get by with just one.
